# Welcome

TO THE DISTINGUISHED  
COMPANY OF PRESTIGE  
FOUNTAIN PEN OWNERS

*3 OF 5*

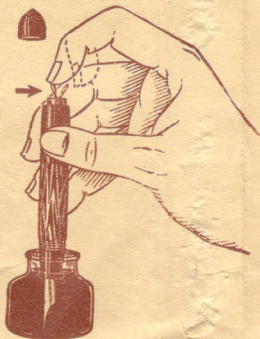

Since you now possess

an Eagle PRESTIGE fountain pen, you will be interested in knowing how it eliminates the basic cause of leakage, flooding and blotting which is inherent in other vacuum filler pens. The patented construction, illustrated, so insulates the ink chamber that heat from your hand or body cannot expand the air within the chamber and force ink out through the pen point. As you can see, the inner barrel (fig. 1), which is the ink chamber, is enclosed in the larger outer barrel (fig. 2). Air circulates freely through the intervening space (fig. 3) and carries off all body heat through the golden vents (fig. 4) in that outer barrel. Expansion *within the ink chamber* is thus eliminated and the ink feeds through the pen point with a smooth, even flow that makes writing a constant pleasure.

*It's easy to fill*

your PRESTIGE fountain pen. Just unscrew the end cap, exposing the filling lever. Immerse the entire pen point and bottom of the finger grip in the ink, then flick the filling lever about seven times by pressing it back as illustrated and letting it snap forward. You can see how full your pen is by holding it to the light and looking through the transparent panels.

*Proper care*

will prolong the life and improve the service of your PRESTIGE pen. May we suggest:

1. The 14 carat solid gold, iridium tipped PRESTIGE point will soon adapt itself perfectly to your style of writing. For continued smooth service, avoid excessive pressure on the point. Avoid lending your pen to others.
2. Use only fountain pen ink from a covered container. Flush the pen occasionally with *cold* water, filling and emptying it exactly as with ink.
3. The patented VISEHOLD clip is reinforced with spring steel to exert a firm and lasting grip. Push it well down over the edge of your pocket to avoid losing your pen.
4. Do not try to make your own repairs or adjustments. Take the *complete* pen to your dealer to be repaired as guaranteed.

*Prestige Mechanical Pencils*

are made with a new, exclusive, 8-pitch spiral feed that prevents the lead from backing up under pressure. *To insert a new lead:*

1. Turn the rear end of the barrel clockwise until the remaining stub of old lead is ejected.
2. Pull off rear end of barrel and take a refill lead from chamber beneath the eraser.
3. Replace the rear end of the barrel and turn it counterclockwise until a new lead, inserted through the tip, protrudes only  $\frac{1}{4}$  inch.
4. Press against this protruding end until you feel the other end enter the clutch of the movement; then turn rear end of barrel until the lead is adjusted to proper writing length.

*The smoothness, strength and durability of Eagle refill leads will keep your PRESTIGE pencil at its best. Made in many degrees of black and several colors.*
